

Product Overview

The JetEx® 6D operates at 1800 RPM giving a much quieter and more fuel efficient power delivery system. The low profile design, combined with our rugged 5th wheel steering, provides superior visibility and maneuverability in today's congested ramp areas.

The reduced fuel consumption rate provides fuel cost savings and reduces engine emissions, which support the "Going Green" initiatives of the GSE industry.

The Hobart GPU features the Tier 3 Cummins "QSB" series electronic diesel engine, and the Hobart designed and manufactured generator. Integrating customer influenced design, innovative technology, and Hobart's years of engineering expertise maximizes the GPU performance and maintains the traditional Hobart standard of durability and reliability.

Hobart Ground Power is the name you can trust to meet your aircraft's needs for reliable 28.5 VDC power.

Featured Benefits

- RELIABLE:** Industry rated #1
- EFFICIENT:** 20% additional fuel savings
12+ Hours operation per tank
- EMISSIONS:** Significant reduction in carbon footprint
- EASE OF USE:** Simple one button start
- SERVICEABILITY:** Large access doors for maintenance
- QUIET:** Operating at <80dBA

Options

- 120VAC, 60Hz Auxiliary Generator
- Tie Down Rings
- Low Fuel Beacon
- Clearance Lights
- Unit Operating Beacon
- Fork Lift Pockets
- Cable Rollers
- CE Kit
